

# Fire retardant ceiling tiles

Lightweight yet rigid with a smooth, uniform surface, our composite panels can add a whole new dimension to ceilings.

Add interest and character or create an air of elegance using ALUPANEL FR® in a variety of fashionable gloss or matt colours plus brushed, metallic or even mirror finishes.

Additionally, with A-Lite FR, you can bring an area to life by printing directly on to the panel, perhaps covering the entire ceiling with a single mural image or using this untapped space for advertising products and services.

Printed ceiling tiles are:

- Popular in medical areas to help create a more calm, relaxing environment
- Great for companies to add corporate branding or sales messages
- Ideal for schools to include information or educational content

## IT DOESN'T HAVE TO BE FLAT!

Alupanel's suitability for ceilings isn't limited to flat tiles. Thanks to great fabrication characteristics, Alupanel with a 0.3mm skin is easily transformed to create 3 dimensional features as it was in this project, where panel sections were folded to form decorative beams, producing an intricate, refined result.

		Panel thickness (mm)	Skin thickness (mm)	Weight (kg/m <sup>2</sup> )	Fire classification (EN13505-1)
<b>ALUPANEL FR</b>	Available in a wide range of colours and finishes, Alupanel is a dual-sided sheet with the ability to be fabricated, folded and formed.	3	0.3	4.83	B-s1,d0
<b>A-LITE FR</b>	Excellent print panel with a specially developed Signal White digital coating for exceptional ink adhesion and bright, intense printed colours.	3	0.2	4.29	B-s1,d0
