a multitude of applications

Sustainability Efforts

RECYCLED CONTENT IN OUR PRODUCTS

Alupanel® products exclusively utilize 100% recycled LDPE in the core, marking a substantial step towards circular economy recycling. Our collaboration with valued suppliers ensures a steady and high-quality source of recycled LDPE for the core.

CARBON FOOTPRINT FROM PRODUCTION

Our manufacturing processes adhere to eco-friendly practices, and we continuously explore innovative ways to reduce waste and conserve resources. The utilization of recycled LDPE has successfully diminished the CO₂ footprint.

PRODUCT LIFE CYCLE

Our Alupanel product range offers durable, indoor and outdoor use panels providing excellent weather resistance with a temperature range from -50°C to +80°C. Waterproof, UV-resistant, and featuring corrosion-resistant aluminium cover sheets, our Alupanel® products consistently delivers a high service life, meeting diverse installation needs.

RECYCLABILITY

Alupanel® products are entirely recyclable, indicating that both the core material and aluminium cover sheets can be recycled to produce new materials. Recycling aluminium requires 95% less energy, generates 95% less emissions, and creates 97% less water pollution than manufacturing primary aluminium. Different methods can be utilized to separate the material components from the composite.

Reach out to us if you would like to learn more about possible recycling options in your area. We currently provide recycling options in the UK and are on the brink of expanding into Europe. Get in touch with us to discover how you can contribute to a more sustainable future.
