

2020 showed us that, for social distancing solutions, ACM can be widely used in place of clear plastic.

As we move through 2021 and the need for prolonged social distancing measures continues, the heavy demand for clear plastic materials is resulting in extended lead times which mean you may start to miss out on business while you're waiting for material.

However, alternative designs that combine clear plastic with the versatility of eco-friendly ALUPANEL[®] can help you satisfy orders and increase the range of solutions you provide by using less clear plastic per item.

Plus, the colors and finishes available in ACM are now even more attractive due to their better ROI and longevity when compared to flexible substrates.

Ease of fabrication makes ALUPANEL[®] ideal for projects like hand sanitizer stations or, for simple counter-top designs, ALUPANEL[®] can be printed direct and combined with a clear visibility panel to provide a simple but effective solution. You can use either all flat components or, by v-grooving ALUPANEL[®] you can make a one-piece, prefabricated surround.

So, you can preserve your clear plastic stock by using it alongside ALUPANEL[®] Aluminum Composite to create efficient and durable social distancing measures with visibility where it's needed.

To find out more about how Alupanel can help you grow your business, please contact your Sales Manager or local distributor.
